Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

1. Claim 16 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim, or amend the claim to place the claim in proper dependent form, or rewrite the claim in independent form. (New Objection)

This claim depends on claim 17 and not a previous claim.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 15 is rejected under 35 U.S.C. 102(b) as being anticipated by Catylators Limited (CL).

See page 1, lines 16-60 along with page 3, lines 9-15 along with all of the drawing figures in CL.

Applicant's arguments have all been considered but are not deemed persuasive.

Applicant argues that CL does not show a gas-permeable hydrophobic solid film encasing the container. The examiner respectfully disagrees. The outer layer 3 as seen in Figure 1 of CL is composed of, for example, glass. This layer is gas-permeable as lines 49-56 on page 1 of CL states and this layer also is hydrophobic and is a solid film. In addition, as seen in Figure 1 of CL, this glass layer encases the catalyst container. The disclosure of CL thus meets the claim language of claim 15.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1745

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 7, 12, 27, 30 and 44 are rejected under 35 U.S.C. 103(a) as being unpatentable over German 2904842 ('842) in view of CL. (New Rejection)

The '842 patent shows a lead acid battery having a pressure relief valve in the cover thereof having a catalyst container as part thereof. See Figure 2 of '842 along with the corresponding text. The only claimed element not shown by '842 is the makeup of the catalyst container. CL teaches the catalyst container as outlined in Section 3 of this action. It is noted that page 1, lines 16-25 of CL allows for the disclosed catalyst container to be placed in the top of a battery and even "to be attached to part of the cell" (line 22). To thus incorporate the catalyst container of CL in the cell of '842 would have been obvious to one of ordinary skill in this art because CL allows for such incorporation into a battery. In addition, the enhanced layer of flame resistant material in the container of CL would protect the same from flame in the battery of '842.

Art Unit: 1745

- ✓ 7. The following is an examiner's statement of reasons for allowance: none of the prior art shows the combination of a catalyst container formed of a flame resistant material that is gas permeable having a catalyst material therein, wherein the container is encased by PTFE.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to John S. Maples whose telephone number is 703-308-1795. The examiner can normally be reached on Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick Ryan can be reached on 703-308-2383.
